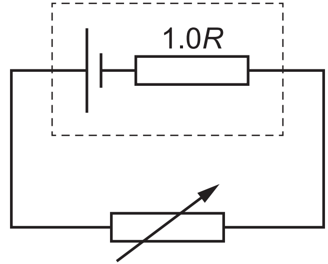
35 The diagram shows a cell of internal resistance 1.0R connected to a variable resistor.



When the variable resistor has an initial resistance of 2.0R, the current in the cell is I_1 and the terminal potential difference (p.d.) across the cell is V_1.

The variable resistor is now adjusted to a new resistance of 4.0R.

What is the new current in the cell and the new terminal p.d. across the cell?

	current	terminal p.d.
A	$0.50I_1$	$1.0V_1$
B	$0.50I_1$	$1.2V_1$
C	$0.60I_1$	$1.0V_1$
D	$0.60I_1$	$1.2V_1$
