

- 13** A hydrometer is a device for measuring the density of liquids. It consists of a weighted bulb at the bottom of a calibrated tube.

The hydrometer is floating in a liquid at room temperature. The length of the tube above the level of the liquid is h .

Which change causes h to decrease?

- A** adding more liquid into the cylinder
- B** decreasing the density of the liquid
- C** increasing the air pressure above the liquid
- D** increasing the density of the liquid
