

- 4 Two coplanar forces act on a small object.

One force has magnitude 10 N. The other force has magnitude 8.0 N and acts at an angle of  $60^\circ$  to the first force.

What is the magnitude of the resultant of the two forces?

- A** 14 N                      **B** 16 N                      **C** 17 N                      **D** 18 N
