33 An a.c. generator is set up so that its coil of wire is perpendicular to the magnetic field. The coil of wire is rotated slowly to produce an alternating electromotive force (e.m.f.). A graph of the induced e.m.f. against time is plotted as the coil rotates.

Which section of the graph represents a rotation of three-quarters of a turn?

A OP **B** OQ **C** OR **D** OS
