**28** When a conductor in a complete circuit cuts across a magnetic field, a current is induced in the conductor.

Which statement about the induced current is correct?

**A** The induced current is in the same direction as the motion of the conductor.

**B** The induced current is in the opposite direction to the motion of the conductor.

**C** The direction of the induced current is in the same direction as the magnetic field.

**D** The direction of the induced current opposes the change causing it.
