4 A sealed container of volume 2000 cm^3 contains air at high pressure.

The container is placed on a top-pan balance.

The balance reads 200.00 g.

All the air is removed by a vacuum pump and the balance reading changes to 196.00 g.

What was the density of the pressurised air?

A 0.00200 g/cm^3

B 0.098 g/cm^3

C 4.00 g/cm^3

D 10.2 g/cm^3
