26 Students are asked for a statement about magnetic fields.

Three statements are listed.

1 A magnetic field is described as a region in which a stationary electric charge experiences a force.

2 The direction of a magnetic field at a point is the direction of the force on an S pole at that point.

3 The relative strength of a magnetic field is shown by the spacing of the magnetic field lines.

Which statements are correct for magnetic fields?

A 1, 2 and 3 **B** 1 and 2 only **C** 2 and 3 only **D** 3 only
