14 The diagram shows the equipment used in an experiment to determine the specific heat capacity of a metal.

In the experiment, a heater is switched on for t s and the increase in temperature $\Delta\theta$ of a block of the metal is measured in °C.

Which equation gives the specific heat capacity of the metal?

A $c = \dfrac{P}{tm\Delta\theta}$ **B** $c = \dfrac{Pt}{m\Delta\theta}$ **C** $c = \dfrac{tm\Delta\theta}{P}$ **D** $c = \dfrac{m\Delta\theta}{Pt}$
