12 Gas particles exert a pressure when they collide with the walls of a container.

Which statement about the gas particles is correct?

A They experience a change in force, which results in a pressure equal to momentum × area.

B They experience a change in force, which results in a pressure equal to $\frac{\text{momentum}}{\text{area}}$.

C They experience a change in momentum, which results in a pressure equal to force × area.

D They experience a change in momentum, which results in a pressure equal to $\frac{\text{force}}{\text{area}}$.
