18 A narrow beam of light consists of two waves of different wavelengths.

The beam of light hits a sharp edge.

Which effect will be seen beyond the sharp edge?

A Both waves continue along the same straight line as before.

B Both waves bend sharply and continue along a new straight line.

C The wave of longer wavelength bends round the sharp edge more than the wave of shorter wavelength.

D The wave of shorter wavelength bends round the sharp edge more than the wave of longer wavelength.
