15 In an experiment to measure specific heat capacity, a block of aluminium is heated and its rise in temperature is measured.

The internal energy gained by the block is ΔE. The mass of the block is m. The rise in temperature of the block is ΔT.

Which expression gives the specific heat capacity of aluminium?

A $\dfrac{m}{\Delta E \Delta T}$ **B** $\dfrac{m\Delta T}{\Delta E}$ **C** $\dfrac{\Delta E}{m\Delta T}$ **D** $\dfrac{\Delta E \Delta T}{m}$
