18 An earthquake under the ocean can produce a dangerous water wave called a tsunami.

The table gives typical data for a tsunami.

ocean depth / m	velocity / km / h	wavelength / km
7000	948	285
2000	504	151

A student suggests three conclusions about the data.

1 The deeper the ocean, the faster the wave.

2 The longer the wavelength, the faster the wave.

3 The faster the wave, the higher the frequency.

Which conclusions are correct?

A 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only
