4 An engineer researched the density of different liquids being used as coolants.

liquid	density / kg/m^3
X	785
Y	1020
Z	1250

None of the liquids mix with water.

Each liquid is poured, in turn, into a container of water. The density of water is 1000 kg/m^3.

Which liquids rise to the surface?

A X only **B** Y and Z **C** Y only **D** Z only
