16 Two metal cans are identical, except that one has a shiny silver outer surface and the other has a dull black outer surface. They each have the same mass of hot water at the same temperature sealed inside them. They are both in a vacuum in the darkness of outer space.

How does the temperature of the water in each one change?

A The temperature of the water does **not** change.

B The water in the black can cools more slowly than that in the silver can.

C The water in the silver can cools more slowly than that in the black can.

D They both cool down at the same rate.
