15 A lamp has a metal filament that glows when heated by an electric current.

The middle of the filament has a very high temperature. The ends of the filament are connected to the base of the lamp and are cooler.

Which statement is correct?

A Some thermal energy is conducted to the base of the lamp.

B The filament radiates energy equally at all points along its length.

C The lamp transfers all of the input energy as visible light.

D When the potential difference (p.d.) across the filament is halved, the power output is halved.
