16 A scientist measures the air temperature at different heights from the floor in a cave. The results are recorded in the table.

height / m	temperature / °C
0	10
10	11
20	13
30	14
40	16

Why does altering the height affect the temperature of the air?

A The particles in warm air have less energy than the particles in cool air.

B The particles in cool air are further apart than the particles in warm air.

C Warm air is less dense than cool air.

D Cool air rises above warm air.
