**13** A rod is pivoted at one end. Initially the angle $\theta$ of the rod to the horizontal is 0°.

The weight of the rod causes a moment *M* about the pivot.

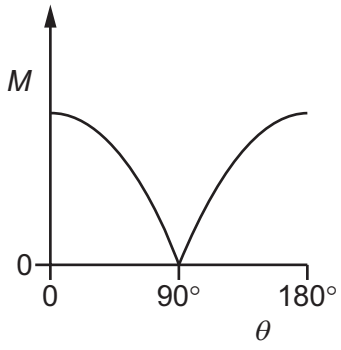

The rod is then rotated in the vertical plane so that the angle $\theta$ of the rod increases from 0° to 180°.

Which graph shows the variation of *M* with $\theta$?

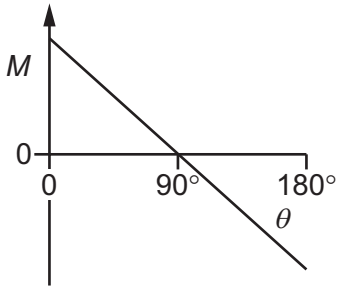

**A**

**B**

**C**

**D**
