40 A nucleus of carbon-10, $^{10}_{6}C$, decays by beta-emission to form a nucleus of boron-10, $^{10}_{5}B$.

For this decay process, what is the change to a nucleon and what is the change in the quark composition of the nucleon?

	change to nucleon	change in quark composition
A	proton to neutron	down becomes up
B	proton to neutron	up becomes down
C	neutron to proton	down becomes up
D	neutron to proton	up becomes down
