39 Four nuclei are represented below.

$$^{28}_{14}\mathrm{E} \qquad ^{25}_{15}\mathrm{G} \qquad ^{25}_{12}\mathrm{M} \qquad ^{24}_{13}\mathrm{Q}$$

Which statement about these nuclei is correct?

A An uncharged atom of element Q has 24 orbital electrons.

B Nuclei G and M are isotopes of the same element.

C When E absorbs a neutron and then emits an α-particle, E transforms into M.

D When M emits a β^- particle, M transforms into Q.
