29 A parallel beam of light of wavelength 600 nm is incident normally on a diffraction grating.

The distance between adjacent slits in the grating is 2.0×10^{-6} m. A screen is placed parallel to the grating, at a distance of 1.50 m from the grating. **Third**-order diffraction maxima are observed at the two ends of the screen, as shown.

What is the distance between the two ends of the screen?

A 1.4 m **B** 2.7 m **C** 3.1 m **D** 6.2 m
