5 A toy car travels on a circular track at a constant speed of $0.50\,m\,s^{-1}$. It passes a point on the track at time $t = 0$ and takes a time of 40 s to travel once around the track.

The magnitude of the average velocity of the car between $t = 0$ and $t = 20\,s$ is v_{20}.

The magnitude of the average velocity of the car between $t = 0$ and $t = 40\,s$ is v_{40}.

What are v_{20} and v_{40}?

	$v_{20}/m\,s^{-1}$	$v_{40}/m\,s^{-1}$
A	0.32	0
B	0.32	0.32
C	0.50	0
D	0.50	0.50
