**9** In an experiment, a metal ball is dropped into a viscous liquid. The terminal velocity of the ball in the liquid is measured.

The experiment is repeated four times. For each repeat, a change is made to one of the following.

1 the density of the metal of the ball

2 the height from which the ball is dropped

3 the density of the liquid

4 the depth of the liquid

Which two changes separately affect the terminal velocity of the ball in the liquid?

**A** 1 and 2 **B** 1 and 3 **C** 2 and 4 **D** 3 and 4
