**9** A ball falls from rest through air and eventually reaches a constant velocity.

For this fall, forces *X* and *Y* vary with time as shown.

What could be forces *X* and *Y*?

| | force *X* | force *Y* |
|---|---|---|
| **A** | air resistance | resultant force |
| **B** | air resistance | weight |
| **C** | upthrust | resultant force |
| **D** | upthrust | weight |
