24 The graph shows the variation of the displacement with distance for a progressive wave at one instant in time.

The period of the wave is 91 ms.

What can be determined about the wave?

A It has a velocity of 0.44 m s^{-1} and a frequency of 11 Hz.

B It has a velocity of 0.55 m s^{-1} and a wavelength of 5.0 cm.

C It is longitudinal and has a frequency of 11 Hz.

D It is transverse and has a wavelength of 4.0 cm.
