

- 16** The formula for the upthrust on a block of wood partially submerged in water is shown.

$$F = \rho g V$$

What do the symbols  $\rho$  and  $V$  represent?

|          | $\rho$           | $V$                                    |
|----------|------------------|----------------------------------------|
| <b>A</b> | density of water | volume of whole block                  |
| <b>B</b> | density of water | volume of block below surface of water |
| <b>C</b> | density of wood  | volume of whole block                  |
| <b>D</b> | density of wood  | volume of block below surface of water |
