19 A ray of light travels in air.

The ray strikes a glass block. The angle between the ray and the block is 60°.

The speed of light in air is 3.0×10^8 m/s.

The speed of light in glass is 2.0×10^8 m/s.

What is the angle of refraction in the glass block?

A 19° **B** 35° **C** 40° **D** 75°
