5 A student is designing a toy. She attaches a model plane to one end of a uniform metal rod. The weight of the metal rod is 0.50 N. The weight of the model plane is 3.5 N.

She uses a counterbalance to keep the system in equilibrium.

What is the weight of the counterbalance?

A 2.5 N **B** 2.8 N **C** 3.5 N **D** 4.7 N
