21 A student is short-sighted.

The student is standing in a park looking at a tree in the distance.

Where, in relation to the retina, does the eye form an image of the tree, and which type of lens is used to correct the image?

	location of image	type of lens
A	behind retina	converging
B	behind retina	diverging
C	in front of retina	converging
D	in front of retina	diverging
