**36** Which statement about electromagnetic induction is correct?

**A** A conductor moving parallel to magnetic field lines induces an electromotive force (e.m.f.) in the conductor.

**B** The direction of the induced electromotive force (e.m.f.) opposes the change which produces it.

**C** The induced current is in a direction parallel to the direction of motion producing it.

**D** The induced electromotive force (e.m.f.) decreases when the speed of the conductor moving across the field lines increases.
