7 A trolley of mass 4.0 kg travelling with a velocity of 4.0 m/s collides with a trolley of mass 2.0 kg travelling with a velocity of 2.0 m/s in the same direction. After the collision, the velocity of the 4.0 kg trolley is reduced to 3.0 m/s.

What is the velocity *v* of the 2.0 kg trolley after the collision?

A 0.25 m/s **B** 4.0 m/s **C** 5.0 m/s **D** 16 m/s
